Introduction to Hangman

A classic word-guessing game where players guess letters one at a time.

Each wrong guess progresses the hangman drawing. Guess the word before the hangman is complete—six wrong guesses and it's game over.

The Hangman

Project Aims

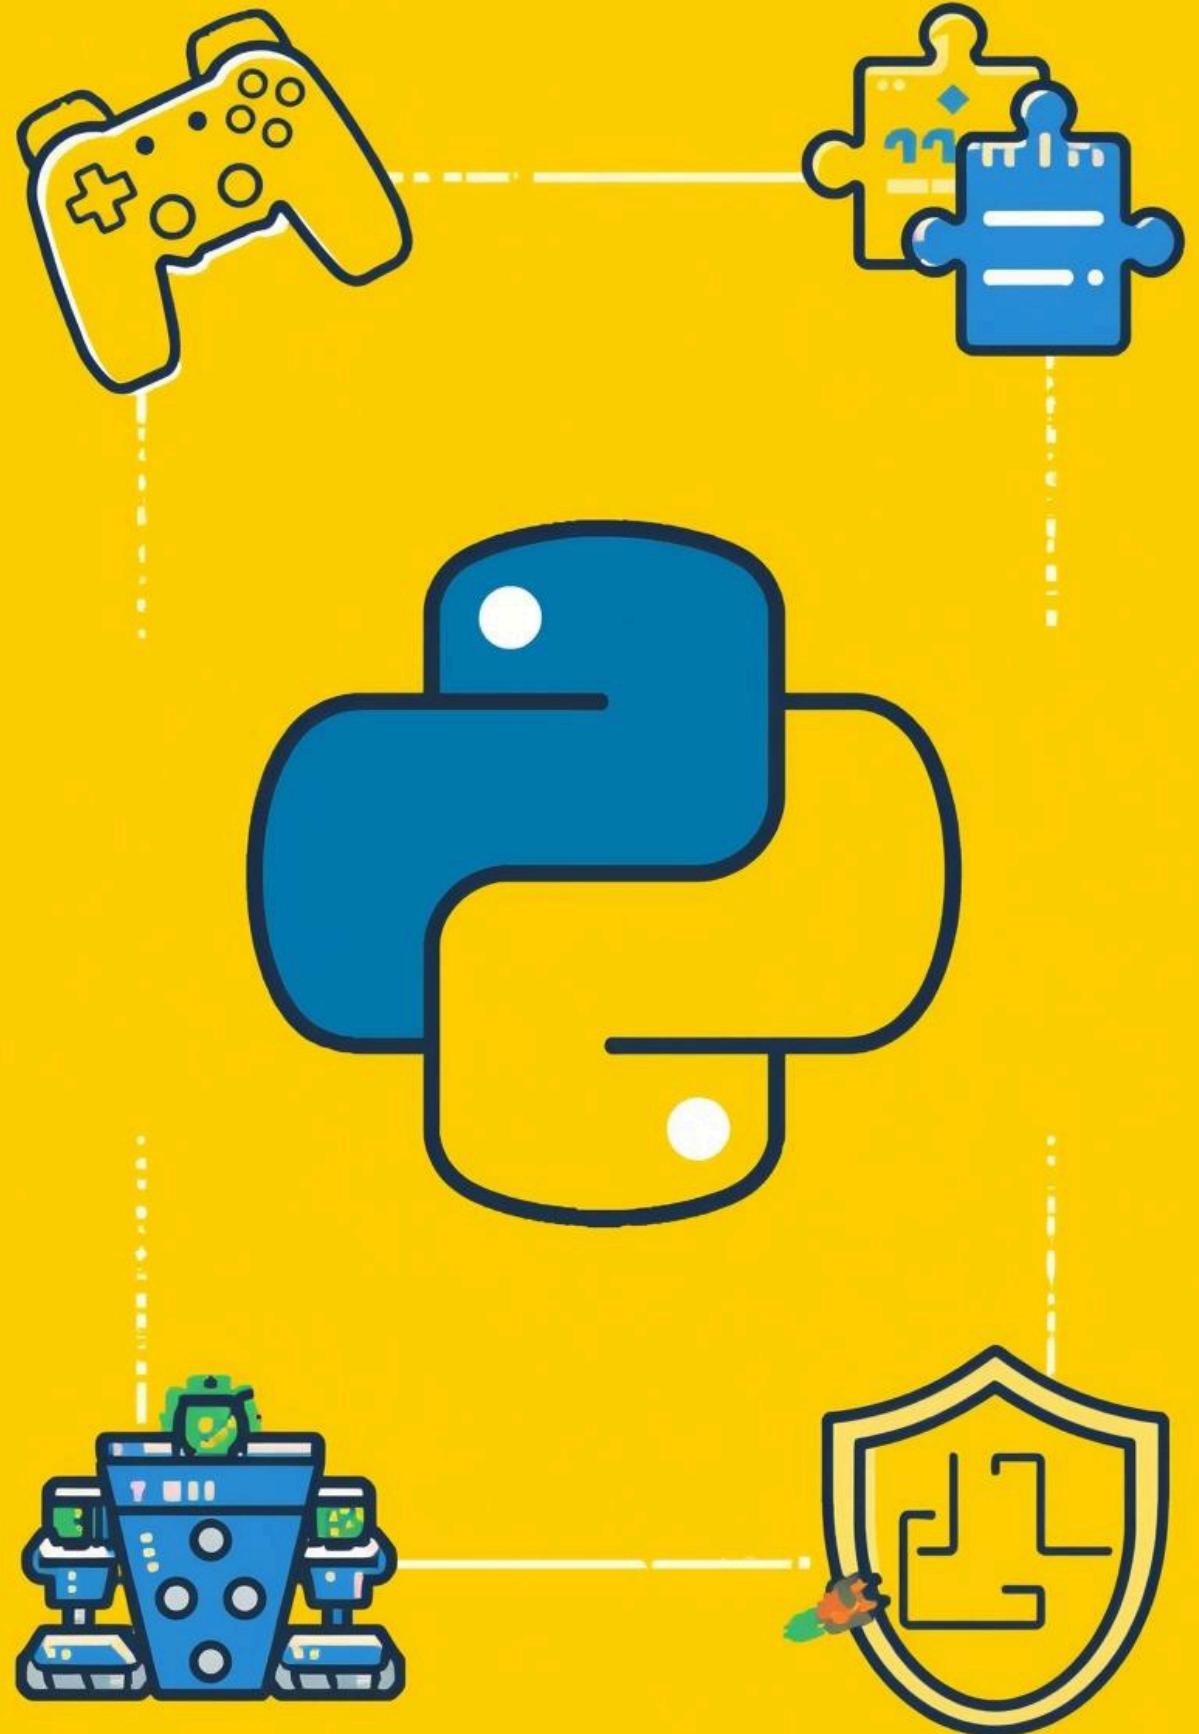

Develop a fully functional hangman word-guessing game in Python

Implement proper game logic with clear win/loss conditions

Create user-friendly terminal interface with visual feedback

Ensure comprehensive input validation and error handling
